EXPERIENCE & EDUCATION

Overseas Game Company, User Growth – User Acquisition	Apr. 2026 – Present
KSIB, International – User Growth	Oct. 2020 – Apr. 2026
Sohu, Sohu Focus	Jul. 2019 – Oct. 2020
BFU, Software Engineering – M.S.	Sep. 2017 – Jul. 2019
BFU, Computer Science and Technology – B.S.	Sep. 2013 – Jul. 2017

PROJECTS

UA Data Agent Apr. 2026 – Present

- **Data foundation:** Built a metadata catalog (inspired by OpenMetadata) covering table schemas, metric definitions, and freshness; connected the warehouse so the Agent can query by contract.
- **Knowledge curation:** Following WrenAI, packaged historical SQL, reports, and SOPs into YAML as metric definitions, query rules, and sample SQL; continuously cleaned stale and conflicting knowledge.
- **UA analysis workflow:** End-to-end pipeline for media buyers — data retrieval, report generation, metric monitoring, anomaly explanation, and decision analysis — with safe read-only queries and auditable delivery. Online satisfaction: 82%.
- **Custom Agent Loop & daily review:** Built an Agent Loop for problem decomposition, tool use, result verification, and evidence write-back; reviewed cases daily, summarized failure modes, and closed the loop of use → retro → governance → iteration.

Ad Creative Production & Synthesis Jul. 2026 – Present

- **Model fine-tuning & stable production:** LoRA-tuned the Wan video model for match-3 gameplay — material swap, tile-face swap, and long-form (>30s) generation. In this vertical, quality beat Seedance at lower unit cost; qualified creative output rose 750% vs. the prior month.
- **Material-aware Foley matching:** For material/SFX mismatch after creative variants, built a Foley workflow on Woosh-DVFlow and Stable Audio 3 that auto-matches and generates SFX from collision timelines plus material type.

Voice Companion App (Fantasay) Oct. 2024 – Dec. 2025

- **Multi-layer interaction architecture:** Led core interaction and service delivery; designed a “Safety Fence – Persona Prompt – Emotion Recognition – Memory Retrieval – Response Generation” stack to ensure safety and character immersion.
- **Long-term memory & emotional recall:** Built a vector-DB long-term memory system with multi-emotion scene recall, dynamically retrieving highly relevant history based on the user’s current emotion to raise conversation warmth.
- **AIGC growth loop:** Built a character-creation workflow for voice bots; used AIGC to auto-generate persona images/videos and copy, with automated review and filtering to keep quality high.
- **Behavior & fine-tuning data pipeline:** Built a conversation-quality data collection pipeline from scratch — unifying likes/dislikes, retries, and exits, plus auto-mining of repetition and low-quality signals; cleaned, bucketed issues, and shipped versioned, traceable datasets for targeted post-training.
- **Monitoring & stability:** Set up alerts on quality (repetition / negative feedback), latency, and stability (failure rate); defined circuit-breaker and rollback policies to keep the experience stable.

Global Site Refactoring & SEO Sep. 2023 – Dec. 2024

- **Immersive PWA + SSR:** Led the upgrade of the promo site to an immersive short-video PWA and rebuilt CSR into SSR; filled in core interaction capabilities, significantly lifting Web DAU and time spent.
- **Scaled content growth engine:** Built an automated content pipeline based on tag clustering, mining high-quality content into tens of millions of Topic aggregation pages, covering long-tail keywords at low cost and boosting SEO traffic.
- **SEO automation & strategy infra:** Built an SEO automation platform from scratch — sitemap auto-push, dead-link inspection, and Crawl Budget monitoring — improving indexation and authority utilization.

Global User Growth Incentive Platform

Oct. 2020 – Dec. 2023

- **Platform 0-to-1:** Built the overseas incentive platform from scratch and led componentization of the task center and gameplay; shipped a rule-engine campaign config platform supporting minute-level launch of check-in / viral loops, cutting delivery from weeks to days.
- **Sports-event draw campaign:** Worked on a large-scale card-collecting viral campaign and prize draw in an overseas market (10M+ participants); designed a sharded DB + precomputation + async peak-shaving architecture, with a real-time dashboard on failure rate and payout latency, supporting 10M-level peak QPS at draw time.
- **Metrics & experiment loop:** Established full-funnel tracking and metric definitions; wired in A/B testing and real-time alerts; iterated with ROI / cost / financial-loss guardrails, plus gradual rollout and rollback.

SKILLS

- Proficient in Java and concurrency models; proficient in Python; capable of frontend development
- Proficient in MySQL, Redis, Kafka, Elasticsearch, and similar middleware; familiar with Hive, ClickHouse, and other big-data components
- Designed and shipped high-concurrency, high-availability incentive gameplay systems that stay stable under heavy traffic
- Deep understanding of Agent design patterns, context management, and knowledge-base construction; familiar with Transformer and Diffusion principles
